EDUCATION

Manipal Institute of Technology, Bengaluru (MAHE) · B.Tech Computer Science & Engineering 2025 – 2029

EXPERIENCE

GirlScript Summer of Code (GSSoC '26)

Apr 2026 – Present

Open Source Contributor

- 5 PRs merged across production repositories in Python and backend tooling.
- Engaged with full maintainer review cycles — code review, testing, and documentation on active codebases.

PROJECTS

CloudSeer | *FastAPI, React, Prophet, scikit-learn, AWS CloudWatch, Claude API*

[GitHub](#)

- Ingests AWS CloudWatch telemetry in real time; applies LOF anomaly detection and Prophet forecasting to predict cost trajectories and fire early spend alerts.
- FastAPI backend with EC2 auto-remediation and Claude API-powered root-cause summaries. Presented as a production-oriented platform; team placed 3rd overall at TechSolstice '26, winning ₹30k.

RoadSense AI | *AWS Bedrock, Multi-Agent Pipeline, FastAPI, Python*

[GitHub](#)

- 5-agent AWS Bedrock pipeline for road damage detection — agents handle ingestion, classification, severity scoring, report generation, and alert dispatch as independent steps.
- Each agent is independently testable and swappable; FastAPI backend returns structured outputs per detection event. Built with Team Iceberg.

SecureFlow | *FastAPI, Python, Pydantic, React, TypeScript, Uvicorn*

[GitHub](#)

- Real-time UPI fraud prevention API scoring transactions against 9 behavioral rules and 40+ scam patterns, returning a risk verdict in under 80ms.
- 4-tier friction engine (NONE / TOAST / DELAY / BLOCK) with full audit trails; modularized into independent scoring, friction, and analytics layers with Pydantic v2 validation.

Pneumonia-AI | *TensorFlow/Keras, MobileNetV2, Grad-CAM, FastAPI, Docker, GitHub Actions*

[GitHub](#)

- Fine-tuned MobileNetV2 on 5,216 chest X-rays via two-phase transfer learning; achieved ~93% test accuracy and ~0.97 ROC-AUC.
- FastAPI backend with /predict and /gradcam endpoints; Grad-CAM overlays for explainability. Docker + GitHub Actions CI with pytest on every push.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL

Backend: FastAPI, REST APIs, Pydantic, async Python, JWT Auth, pytest

Cloud & DevOps: AWS (EC2, Lambda, S3, CloudWatch, Bedrock), Docker, boto3, GitHub Actions

ML & Data: TensorFlow/Keras, scikit-learn, Prophet, MobileNetV2, Grad-CAM, pandas

Frontend: React 18, TypeScript, Tailwind CSS, Vite

CS Fundamentals: DSA (300+ problems, LeetCode 1600+) · OOP · System Design

ACHIEVEMENTS

- **3rd Place, TechSolstice '26 Hackathon (MIT BLR)** — Built CloudSeer against 50+ teams as part of Team QUADBOTS. Judges encouraged pitching to AWS.
- **Rank 11 / 560+ Teams, NIT Durgapur National Hackathon** — Solo top-2% placement at a national-level competition.
- **LeetCode 1600+** — 300+ problems solved in Python; consistent top-tier contest participant.
